

Assignment 2 Tutor Feedback [Dr Oliver Buckley]

The presentation is clear and accessible and demonstrates a good approach to delivering your work. You have made good use of the slides to support your points, although some images (particularly the code snippets) are a bit difficult to read properly. The style and performance of the presentation are very good and show that you are comfortable with the material.

The code is presented inline with the normal Python standards and is fairly readable. There is a lack of documentation or comments within the code itself making it difficult to fully understand what you have developed and why, at times. Remember it is important to document your code with appropriate comments where possible so that you can remember what you were doing in the future but also to enable further contributors.

It was hard to properly gauge what the aim of the software was in places and I think you needed to be more explicit about how the different components function.

There is a lack of testing within your solution and I would have expected to see some evidence of validating the software and ensuring you are getting the right results.
