

UNIT 12. Week 12

This week's focus was on Industry 4.0 and its impact on Machine Learning. The objectives were to understand machine-derived data growth, the use of machine learning algorithms in Industry 4.0, digital twins, and job prospects in this era.

I started by reading recommended sources to stay updated on the latest insights in Industry 4.0.

I attended the Seminar "The Future of Machine Learning" to gain knowledge about future prospects and trends in the field.

Additionally, I completed my End of Module Assignment: e-Portfolio, summarising my learning journey throughout the module.

I provided feedback through the End of Module Survey to help improve the course for future students.

By the end of the week, I achieved significant learning outcomes, understanding the challenges and opportunities of Industry 4.0 and the profound impact of machine learning on societies and industries.
