

UNIT 4. Week 4 - Linear Regression with Scikit-Learn

The aim of this week was to immerse ourselves in the art of modelling a linear relationship using Scikit-Learn, developing a multivariate linear regression model, and evaluating its effectiveness.

To begin, I delved into the recommended reading list.

As the week progressed, I looked forward to the Seminar titled "Linear Regression with Scikit-Learn." This interactive session provided hands-on experience, guiding me through the intricacies of applying linear regression to complex datasets using Scikit-Learn.
