

## UNIT 10. Week 10

Last week's focus was on Convolutional Neural Networks (CNN) to gain a comprehensive understanding of their structure and functionalities.

I began my exploration by reading the recommended reading list.

Then, I participated in Collaborative Discussion 2, where I shared my summary post.

Unfortunately, during a very busy period, I couldn't attend a Seminar Session. But I watched it later.

Furthermore, the week included a Team 5 call, where we collectively strategized our solution, explored the dataset, and even considered implementing CNN instead of ANN for improved accuracy. However, in alignment with assignment requirements, we made a collective decision to pursue individual versions and later integrate them into a unified solution.
