

UNIT 3. Week 3

This week's aim was to explore agent-based development and research history, discuss various architectures, and understand their mechanisms through worked examples.

I started by watching the Lecturecast "Introduction to Agent Architectures," which sharpened my ability to analyse agent-based systems and evaluate intelligent agent techniques for real-world challenges.

Continuing with reading sources, I focused on different approaches to agent architectures.

The week concluded with writing the Summary Post for Collaborative Discussion 1. While I found the introduction to Agents interesting and straightforward, the Architecture part was a bit unclear for me.
