

## UNIT 2. Week 2

This week, we aimed to learn about First Order Logic, its connection to natural language, and the use of quantifiers within it.

I started by diving into the reading materials to understand the key elements of intelligent agents.

In Collaborative Discussion 1, I provided peer reviews for other participants, broadening my perspectives.

The week concluded with the seminar "Introducing First Order Logic," where this logical system was explored .

Having studied First Order Logic during my BSc, the week felt manageable, but I approached it with fresh curiosity.
