

UNIT 11. Week 11

Week 11 focused on Industry 4.0, smart manufacturing, and agent-based modelling in the financial sector.

We started with an informative lecturecast on "Intelligent Agents in Action," where I learned to deploy software tools for agent-based systems and developed teamwork skills.

Exploring real-world applications of intelligent agents through reading materials, I gained insights into their potential impact.

As Team 5, we successfully completed Assignment 2, including presentations and peer reviews.
