UNIT 8. Week 8

This week, we explored Natural Language Processing (NLP) in action, focusing on key elements of the Word2Vec model and investigating constituency-based parse trees.

Starting with informative reading materials, I learned about developing parse trees.

Continuing with the e-portfolio element "Creating Parse Trees," I further honed my skills in NLP.

The week concluded with a practical seminar, providing hands-on examples of essential NLP methods.

By the end of the week, I achieved the learning outcomes of understanding NLP models, engaging with practical NLP methods, and proficiently creating parse trees.
