Summary Post

by Anastasia Rizzo - Sunday, 16 July 2023, 12:52 AM

In my initial post, I discussed the focus on generative AI and expressed optimism about advancements in AI. The post highlighted the benefits of AI writers in generating written content for businesses, citing examples from Forbes and The Washington Post. The role of Grammarly as an AI-powered writing assistant tool was also mentioned. I emphasised the importance of exercising caution when using AI writers, ensuring ethical and accurate content with human supervision. The post also mentioned the ongoing review of the EU AI Act by the European Parliament to address potential risks associated with AI, particularly in Generative AI.

Adeniyi (2023) shared an interesting perspective on AI as a creative catalyst, generating ideas, plot points, and dialogue to assist writers in overcoming obstacles and exploring new directions. This fosters imagination and innovation in storytelling.
Kyriacou (2023) highlighted two frequently overlooked aspects: potential quality concerns and the absence of emotional intelligence in AI-generated content. I agreed with his points on quality issues and the lack of emotional intelligence. I also appreciated his recognition of the expertise and qualitative outcomes brought by human writers.

Overall, the discussion underscores the opportunities and challenges of generative AI, underscoring the need for responsible use, ethical considerations, and regulatory frameworks to ensure its positive impact on society.
